---

PROFESSIONAL PROFILE

Web developer focused on shipping landing pages and funnel infrastructure end-to-end, fast and with minimal hand-holding. Hands-on experience building and launching production pages in WordPress/Elementor and Squarespace, and extending live sites I didn't build from scratch.
Designed and deployed a complete WhatsApp lead-qualification funnel (Make, Airtable, Twilio, AI-driven responses) from first contact to qualified handoff. Comfortable reading webhook payloads, debugging broken automations, and integrating REST APIs without treating them as black boxes.
AI tools (Claude, ChatGPT) are part of my daily workflow, not an occasional aid. Background coordinating technical processes across multidisciplinary teams, with working knowledge of Zapier and Webflow.

WORK EXPERIENCE

WPP Production — Buenos Aires, Argentina

Freelance Front-End Developer| *July 2026 – Present*

- Buenos Aires, Argentina / Remote
- Develop and maintain responsive websites for multiple Latin American markets, adapting each implementation from the original version developed for the United States.
- Modify existing code, routes, links, images, file names, directories, and other elements required for proper website localization.
- Work with HTML, CSS, JavaScript, responsive web design, and frontend development standards.
- Contribute as part of an agile pod of five members, including two freelancers and three permanent team members, with the support of a Senior Developer and a Team Lead.
- Collaborate continuously with the United States-based team, including the Project Manager and Account/Project Partner, as well as translation and QA teams.
- Manage tasks, progress updates, corrections, and requirements through a ticketing system.
- Contribute to one of the most complex projects within the program due to its high volume of pages and earlier launch date compared with other pods.
- Collaborate with other pods to resolve blockers, share knowledge, and accelerate project execution.
- Apply agile working methods in an international, collaborative environment focused on meeting demanding deadlines.
- Participate in a training session and workshop delivered for a leading global technology-sector client under a confidentiality agreement.

Judicial Investigation Coordination Office | Buenos Aires, Argentina
Investigation Agent | Feb 2023 – Present

- Prepared technical documentation and managed digital data.
- Provided process coordination and IT support to multidisciplinary teams.

Governmental Control Agency | Buenos Aires, Argentina
Inspector | Feb 2020 – Feb 2023

- Coordinated operations and administrative processes using digital tools.
- Assisted citizens and drafted technical reports.

Public Space Control Department | Buenos Aires, Argentina
Inspector | Dec 2017 – Dec 2019

- Organized and controlled processes with digital documentation support.
- Public attention and administrative reporting.

GTC Ribbon | Buenos Aires, Argentina
Executive Assistant| Oct 2015 - Mar 2016

- Administrative tasks and digital documentation.
- Inventory management and operational support.

HIGHLIGHTED PROJECTS

Buenos Aires Móvil — Corporate Web Platform

React · TypeScript · TanStack Start · Tailwind CSS · Leaflet
Development of a corporate web platform for an out-of-home advertising company, focused on user experience, lead generation, and the presentation of coverage and services.

- *Built a modular frontend architecture using React, TypeScript, and TanStack Start.*
- *Implemented an interactive map using Leaflet and React Leaflet, including routes, filters, selection, zoom controls, and responsive information panels.*
- *Developed a mobile-first responsive interface.*
- *Created reusable components for services, case studies, FAQs, reviews, and contact sections.*
- *Applied technical SEO, accessibility, and performance best practices.*
- *Used Git/GitHub, Vite, ESLint, and Prettier as part of the development workflow.*
- *Used Artificial Intelligence tools to support code review, debugging, error detection, issue resolution, and implementation validation.*

WhatsApp Lead Qualification Funnel | Make, Airtable, Twilio, AI

Real estate lead-qualification funnel for the Argentine market, built end-to-end as a product rather than a one-off client delivery, using AI-driven conversational logic.
Role: Funnel & Automation Developer
Key achievements: Designed the complete conversational funnel from first WhatsApp contact to qualified lead handoff, by mapping it as a state machine with conditional branching and error handling. Automated lead triage end-to-end, measured by the number of qualification steps completed without human intervention, by integrating Twilio webhooks with Airtable as the live data layer and an AI model for response generation. Resolved complex Make.com blueprint errors (nested expressions, duplicate module IDs, self-referencing variables) across multiple refactor passes, by isolating each module's logic and rebuilding the dependency chain.

Landing Pages & Web Production | WordPress/Elementor, Squarespace

Built and launched client-facing landing pages end-to-end across WordPress/Elementor and Squarespace, plus shipped a change to a live production app I didn't build.
Built and launched a client portfolio site (Analía Cervini, PhD), by implementing a custom Elementor build with Swiper.js carousels, filterable galleries, and a JS-based sticky header, measured by full SEO setup and live Search Console indexing at launch.
Built and launched a Squarespace product page for a Dubai-based B2B distributor (Ghanim Trading LLC), by redesigning to a light theme and resolving sticky-header CSS conflicts, measured by a fully functioning public page ready for client traffic.
Extended a live production app (Buenos Aires Móvil) without prior ownership of the codebase, by adding a new bus line to its interactive map feature, measured by shipping the change with zero breaking regressions.

Automation Flows | n8n, Make, Zapier, REST APIs, Webhooks

Automation workflows built for real business processes, integrating multiple services and APIs end-to-end.
Role: Automation Developer
Key achievements: Designed multi-step automations in n8n and Make, by combining conditional logic, error handling, and webhook-based triggers to initiate processes automatically. Integrated REST APIs across third-party services, measured by zero unhandled failures in production runs, by debugging requests at the payload level instead of treating integrations as black boxes. Built working knowledge of Zapier as an alternative automation layer, by mapping equivalent trigger-action logic to my existing n8n/Make workflows.

Ecommerce (monorepo) | React (Front), Node/Express (Back)

Fullstack architecture with separated frontend, backend, and admin modules. Demonstrates end-to-end flow: UI, API, and admin dashboard..

- Role: Fullstack Developer
- Key achievements: Frontend and Backend integration, reusable components, CRUD endpoints, routing

AI Website Builder (In Progress)

- *Stack: React, JavaScript (ES6+), Tailwind CSS, Component-based Architecture*
- Role: Frontend/ Fullstack Developer
- Key achievements:
  - Developing a scalable frontend architecture for an AI-powered website builder focused on dynamic layout generation and reusable UI components.
  - Designed a modular component system to support multiple page sections, layouts, and styling variations.
  - Implemented responsive design principles using Tailwind CSS to ensure cross-device compatibility.
  - Structured the project with a clear separation of concerns to facilitate future backend and API integration.
  - Focused on maintainability, reusability, and performance optimization from early development stages.
  - Actively iterating on UI/UX and component architecture following product-oriented development practices.

Portfolio Personal |React + Vite, ESLint

Personal portfolio website showcasing projects and skills, built with a modern stack (React + Vite).

- Role: Frontend Developer
- Key achievements:
  - Built a high-performance personal portfolio using React and Vite, focusing on fast load times and optimized asset bundling.
  - Designed a component-driven frontend architecture to ensure maintainability and scalability.
  - Applied SEO-friendly structure and semantic HTML to improve accessibility and search visibility.
  - Implemented modern frontend tooling and linting standards to enforce code quality and consistency.
  - Optimized images and assets to enhance performance and user experience.

EDUCATION

Universidad Argentina de la Empresa (UADE)
Associate Degree in Software Development | Aug 2018 - Present

Coderhouse
Fullstack Developer | Feb 2022 - Apr 2023

Villa Devoto School
Bilingual High School Diploma in Science and Humanities | Jan 2008 - Dec2014

CERTIFICATIONS

- **Introduction to Professional Skills in Data Analysis, Linkedin**
- **Professional Foundations of Data Analysis, Microsoft and Linkedin**
- **Learn Data Science:Basic Concepts, Linkedin**
- **Learn Data Analysis, Linkedin**
- **Red Hat System Administration, Redhat Rhcsa & Rhce Linux**
- **Network Basic Course, Cisco Networking Academy**

SKILLS

Landing page builds — WordPress/Elementor, Squarespace — advanced
HTML5, CSS3, JavaScript (ES6+) — advanced
Responsive Web Design — advanced
Tailwind CSS — advanced
Bootstrap CSS — advanced
Automation: n8n, Make (Integromat) — hands-on production experience
Zapier — working knowledge
Webflow — working knowledge
REST API integrations (authentication, headers, tokens)
Webhooks & event-based systems
JSON data handling, asynchronous workflows
AI-native workflow (Claude, ChatGPT) — daily use
Google Ads Certified (Display, Search)
React.js & React Hooks — advanced
Vue.js — intermediate
Git & GitHub — advanced
UI/UX principles — intermediate
Deployment (Netlify, Render, Vercel) — intermediate
Agile / Scrum methodologies — intermediate
Node.js & Express.js, SQL & MongoDB — intermediate
Power BI — intermediate
Spring Boot, Java, Docker, TypeScript — intermediate (secondary)

LANGUAGES

- **Inglés avanzado (C1) -** oral and written
- **Español -** native
